Research Scientist in Vascular Biology

The University of Ottawa Heart Institute is Canada's foremost academic cardiovascular centre dedicated to understanding, preventing and treating heart disease. The Institute, a world-class independent research institute is affiliated with the University of Ottawa and the Ottawa Hospital, and immersed in a rich network of clinical and research activities within the Ottawa community and beyond.

We are currently seeking to appoint a vascular biologist, with strong leadership skills and a record of achievement, who will contribute to the growth of research activities in our setting and in our city.

We wish to recruit a dynamic investigator who has demonstrated research creativity and productivity in the areas of vascular or cardiovascular biology. We are particularly interested in a scientist, familiar with the use of animal models, who has been active in the areas of integrative or translational research as they apply to vascular cell function in health and disease.

Applicants must possess a PhD and/or MD degree. The successful candidate will be engaged in both independent and collaborative research and is expected to direct the Histopathology Core Laboratory, a fundamental resource of the Institute.

Interested applicants should submit a curriculum vita, a summary of their most significant research contributions, and the names of three professional references. Please forward these details to:

Andrew Pipe, CM, MD
